WHAT IF COMMERCIAL SYMBOLS REPLACED WORDS?

1

2

Language has always evolved alongside the tools and systems that shape everyday life. Today, communication is no longer driven primarily by spoken or written words, but by symbols designed to be immediate, recognizable, and efficient.

Logos already function as verbs, shortcuts, and emotional triggers.

We google information, whatsapp someone, zoom a meeting.

Commercial symbols no longer represent actions — they perform them.

What if this process were no longer accidental?

What if, instead of emerging spontaneously and chaotically, the replacement of words with commercial symbols became formalized, regulated, and shared?

In a world saturated by digital content, attention is fragmented and language is compressed.

Images are processed faster than text; symbols bypass grammar, translation, and cultural barriers.

Brands, optimized for memorability and repetition, are perfectly suited to occupy this space.

This project explores a near future in which commercial symbols fully replace words, becoming the primary units of language.

A future where communication is no longer built on meaning, but on recognition.

Where language is not learned, but licensed.

What if language itself became a commercial territory?

2030.

Language is changing.
Words are losing ground to symbols.

Brands no longer operate exclusively within the commercial sphere. They progressively occupy cultural, cognitive, and linguistic spaces, shaping the way people perceive, remember, and communicate. Constant exposure to digital platforms produces a condition of cognitive saturation, often referred to as brainrot: information is consumed rapidly, attention is fragmented, and language is pushed toward extreme efficiency.

At the same time, a process of linguistic vulgarization emerges, in which commercial names replace common words. This shift is spontaneous, unregulated, and driven by habit rather than intention.

As a result, language becomes increasingly compressed and visual, while meaning is delegated to symbols designed for immediacy and repetition.

Communication loses structure, coherence, and shared rules.

from text
to abbreviations
to **symbols.**

7

What began as a tendency toward simplification has evolved into radical synthesis. Over time, language has shifted from sentences to actions, and from actions to symbols. By 2030, the symbol represents the most advanced form of expression.

8 A single logo contains entire imaginaries: actions, values, habits, and shared cultural meanings accumulated through constant exposure.

This density makes the symbol uniquely effective. It does not translate language, it concentrates it.

It does not replace meaning, it carries it in a compressed, instantly accessible form.

Using a logo instead of a sentence is not a loss of language, but its evolution.

An adaptation to speed, recognition, and immediacy. Language does not disappear.

It converges into the symbol.

In a world where brands take over spaces, habits and imagination, logos have become the new language.

INSTITUTE OF COMMON NOMENCLATURE

Without regulation, the potential of this symbolic landscape remains fragmented and inconsistent, a space that requires organization. It is within this unregulated landscape that ICON emerges. The Institute of Common Nomenclature defines and structures the associations between words and logos, transforming spontaneous usage into a coherent, shared system.

By formalizing this new language, ICON allows brands to occupy new mental territories while providing a simple, efficient, and universally readable form of communication.

In doing so, the institute not only resolves the challenges of cognitive saturation and linguistic chaos, but also opens a new frontier for advertising, where language itself becomes a medium for influence.

Is this communication
or the ultimate campaign?

Formalizing the System

Without regulation, the potential of this symbolic landscape remains fragmented and inconsistent, a space that requires organization. It is within this unre- landscape that emerges. The I Common Nome defines and str the association between words logos, transform spontaneous u into a coherent system.

By formalizing this new language, ICON allows brands to occupy new mental territories while providing a simple, efficient, and universally readable form of

why?

**To let brands expand
their influence.**
